Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/089,253

Applicant(s)

LANGER ET AL.

Examiner

Ramsey Refai

Art Unit

3627

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 March 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Response to Amendment

Responsive to Amendment received March 5, 2008. Claims 1-9 have been amended. Claims 10-20 are new. Claims 1-20 are now presented.

Response to Arguments

1. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claim 11 is objected to because of the following informalities:

Claim 11 improperly depends on itself. For examination purposes, claim 11 will be taken as being dependent on claim 10.

Appropriate correction is required.

Specification

3. The amendments to the specification and the new abstract filed 03/05/08 have been entered.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-9 and 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hultgren (US Patent No. 6,868,391) in view of Stewen (WO 99/22346).

Art Unit: 3627

6. As per claim 1, Hultgren teaches a method for controlling and operating a machine having a mobile radio communication transmit/receive unit and configured to be called from a user's mobile telephone unit over a mobile telephone network via an abbreviated mobile telephone number affixed on machine, comprising:

upon receipt of a call from the user's mobile telephone unit to the abbreviated mobile telephone number (**column 4, lines 50-65**), establishing a connection to a bank (**column 4, lines 22-25; bank account**) and determining if the user has an account at that bank, and if so, whether there are sufficient funds in the user's account (**column 7, lines 18-47; checks for sufficient funds in customer account**),

if the user has an account and there are sufficient funds prompting, via the vending machine, the user to select a merchandise item, after the merchandise item has been dispensed, generating, a billing entry in the vending machine, and settling the billing entry via a payment gateway, the step of settling comprising accessing the user's account, determining the user's account number based on the user's mobile telephone number (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

Hultgren fails to teach the controlling and operating a *vending machine* from a mobile telephone. However, in the same field of endeavor, Stewen teach using a telephone to pay for purchases made through a vending machine wherein charges for items received from a vending machine are applied to a user's telephone account (see **page 2, lines 14-27, abstract, page 5, lines 14-28, also Applicant's remarks on 14 of the remarks dated March 5, 2008**). It would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to combine Hultgren and Stewen because doing so would allow Hultgren's system to be used to purchase items from a vending machine.

7. As per claim 2, Hultgren teaches wherein charging for the dispensed merchandise takes place by combining standard IN traffic control with standard Internet payment systems (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

Art Unit: 3627

8. As per claim 3, Hultgren teaches a method further comprising: determining the actual telephone number of the vending machine in an intelligent-network control point, establishing a connection from the intelligent network control point to the payment gateway and issuing a request with a reference to a vending machine to reserve a certain maximum amount on the mini payment account of the user who has been uniquely identified based on his telephone number **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

9. As per claim 4, Hultgren teaches a method further comprising: when sufficient funds exist on the mini payment account, making the reservation of the certain maximum amount with the reference to the telephone number of the vending machine, positively acknowledging the reservation in the intelligent network control point and holding the reserved amount unavailable for other payments until the reserved amount has been cleared **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

10. As per claim 5, Hultgren teaches a method further comprising :if the acknowledgment from the payment gateway is positive, informing via the intelligent network control point a mobile switching center of an unabridged telephone number for the vending machine (1), establishing a voice connection via the mobile switching center to the vending machine, identifying, in the vending machine from the ISDN signal the telephone number of the user, and wherein the step of prompting the user via the vending machine to select merchandise item comprising prompting the user in such a way that the use communicates with the automatic vending machine via his mobile telephone unit, where after the user is prompted to select a merchandise item, the GSM connection between the user and vending machine is initiated by the vending machine, wherein when the user presses a selection button, the selected merchandise item is dispensed and wherein the step of generating a billing entry comprises causing the vending machine to generate an electronic billing entry **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

Art Unit: 3627

11. As per claim 6, Hultgren teaches a method wherein the billing entry includes the vending machine telephone number, the GSM user's telephone number, a merchandise identification and the price **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

12. As per claim 7, Hultgren teaches a method further comprises transmitting the billing entry by the vending machine to the payment gateway via a GSM short message or GSM-USSD **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

13. As per claim 8, Hultgren teaches a method further comprising receiving the electronic billing entry at the payment gateway, determining at the payment gateway, based on the GSM telephone number of the user, the mini payment account of the user, and recognizing and clearing at the payment gateway based on the vending machine telephone number, the reservation previously made by the intelligent network service point, wherein the step of recognizing and clearing comprises debiting the cost of the merchandise item to the user's account and crediting the cost of the merchandise item to an account of the vending machine via a credit entry **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

14. As per claim 9, Hultgren-Stewen teaches a method according to controlling the vending machine by a voice connection **(Stewen: page 2, lines 14-27, abstract, page 5, lines 14-28).**

15. As per claim 18, it contains similar limitations as claim 1 above, therefore is rejected under the same rationale.

16. As per claim 19, Hultgren teaches wherein the electronic billing entry contains the machine call number, the GSM user call number, an item identifier, and the price **(due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).**

Art Unit: 3627

17. Claims 10-17 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hultgren (US Patent No. 6,868,391) in view of Stewen (WO 99/22346) in further view of "Official Notice".

18. As per claim 10, Hultgren teaches a method for activating and operating an automatic machine, which has a mobile radio telephone transmitting/receiving device and can be called from a mobile radio telephone terminal of the user via a mobile radio telephone call number installed on the machine via a mobile radio telephone network, comprising:

requesting, via the automatic machine upon receipt of a call from a user to the mobile radio telephone call number, that a maximum amount of money be reserved from a user's bank account in a bank (**column 6, lines 14-50, column 4, lines 48-55, fig 3A**),

processing the reservation via a payment gateway connected to the bank comprising:
determining whether the user has a mini-payment account set up at the bank using the mobile radio telephone call number of the user; accessing the mini-payment account of the user to determine if the user has sufficient credit to pay the voucher (**column 7, lines 18-47**);

determining, at an intelligent network service control point of the mobile radio telephone network, an actual call number of the automatic machine (**column 6, lines 50-column 7, lines 17, column 4, line 48-column 5, line 4**);

producing a connection from the intelligent network service control point to the payment gateway;
sending a request from the intelligent network service control point to the payment gateway for a reservation for said maximum amount to be held in the mini-payment account of the user identified by the user's call number (**column 4, line 48-column 5, line 4, column 7, lines 18-37**);

if there is sufficient credit, processing, by the payment gateway, the reservation and sending a positive acknowledgement to the intelligent network service control point (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**);

Art Unit: 3627

if there is not sufficient credit, or if the user does not have an account at the bank, sending a negative acknowledgment from the payment gateway to the intelligent network service control point (column 7, lines 39-43),

upon receipt of the positive acknowledgment by the intelligent network service control point: sending an instruction from the intelligent network service point to the mobile switching center of the actual call number of the automatic machine, causing the mobile switching center to initiate a voice connection to the automatic machine; prompting, by the automatic machine, the user to select an item; and ejecting the item at the automatic machine in response to the selection (due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47).

Hultgren fails to teach the controlling and operating a *vending machine* from a mobile telephone. However, in the same field of endeavor, Stewen teach using a telephone to pay for purchases made through a vending machine wherein charges for items received from a vending machine are applied to a user's telephone account (see page 2, lines 14-27, abstract, page 5, lines 14-28, also Applicant's remarks on 14 of the remarks dated March 5, 2008). It would have been obvious to one of ordinary skill in the art at the time of the Applicant's invention to combine Hultgren and Stewen because doing so would allow Hultgren's system to be used to purchase items from a vending machine.

Furthermore, Hultgren fails to teach *terminating the call*. However, "Official Notice" is taken that the concept and advantages of this feature are well known in the art. It is well known in the art to terminate a call if the caller cannot proceed with the automated telephonic transaction. Hultgren teaches the customer is notified of an invalid transaction resulting from insufficient funds via a message (see at least fig 3A: 318, column 7, lines 39-47). Since the customer is using a telephone to buy goods and services by dialing the number, it would have been obvious to modify Hultgren to merely terminate the call instead of sending a message because doing so would end the transaction and allow the customer to retry the transaction.

Art Unit: 3627

19. As per claim 11, Hultgren teaches wherein billing for the item issued takes place by coupling standard intelligent network traffic control to standard Internet payment systems (**Figs 1, 5B-5C**).

20. As per claim 12, Hultgren teaches wherein if there is sufficient credit in the mini-payment account the reservation relating to the call number of the automatic vending machine is carried out in positively acknowledged to the intelligent network service control point, wherein the reserved amount is not available for other payments until the reservation has been canceled (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

21. As per claim 13, Hultgren teaches further comprising:

upon receipt of the positive acknowledgment, extracting, by the automatic vending machine, the user's call number from the ISDN signaling, wherein the user communicates with the automatic vending machine via the user's mobile telephone and accordingly the GSM connection between the user and the automatic vending machine is triggered by the automatic vending machine, and wherein after the item is ejected, the automatic vending machine produces an electronic billing entry (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

22. As per claims 14, and 17, Hultgren-Stewen teaches a method according to controlling the vending machine by a voice connection (**Stewen: page 2, lines 14-27, abstract, page 5, lines 14-28**).

23. As per claim 15, Hultgren teaches transmitting the electronic billing entry from the automatic vending machine to the payment gateway using a GSM short message or a GSM unstructured supplementary service data (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

24. As per claim 16, Hultgren teaches when the payment gateway receives the electronic billing entry from the automatic vending machine: using the user's GSM call number to determine the user's mini-payment account; using the automatic vending machine call number to identify and cancel the reservation previously reserved by the intelligent network service control point; debiting an amount equal to a price of

Art Unit: 3627

the item from the user's mini- account; and crediting said amount to the account of the automatic vending machine operator via a credit note (**due to claim language, these limitations are not required since the prior art teaches the scenario when the customer does not have sufficient funds, see column 7, lines 39-47**).

25. As per claim 20, Hultgren teaches determining if the user does not have an account, there are insufficient funds, or the user is on a black list (**column 7, lines 39-47**) but fails to teach *terminating the call between the automatic vending machine and the user's mobile telephone unit*. However, "Official Notice" is taken that the concept and advantages of this feature are well known in the art. It is well known in the art to terminate a call if the caller cannot proceed with the automated telephonic transaction. Hultgren teaches the customer is notified of an invalid transaction resulting from insufficient funds via a message (**see at least fig 3A: 318, column 7, lines 39-47**). Since the customer is using a telephone to buy goods and services by dialing the number, it would have been obvious to modify Hultgren to merely terminate the call instead of sending a message because doing so would end the transaction and allow the customer to retry the transaction.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
